Simplifying the management of your Super Fund

BankLink helps make Australians' lives easier by simplifying the management of their Super Fund. Your accountant recommends The BankLink Service as it provides them with the best possible way to manage your Super Fund – while also saving you time and stress.

BankLink ensures your accountant can work more effectively with you in meeting your trustee responsibilities and complex compliance requirements.

Saving you time, stress and effort

BankLink will save you time and remove the stress associated with the administration of your Super Fund, such as the management of contribution caps.

BankLink will give your accountant access to all the information they need about your Super Fund transactions to ensure your records are always complete, accurate and up-to-date.

The service lets your accountant receive your Super Fund transactions electronically and, because it's automated, you'll also have fewer queries from them.

And the best thing – it's completely secure and unbelievably easy to use.

BankLink has solutions to help you easily supply information about your Super Fund transactions to your accountant and for managing your documentation. Your accountant will recommend the solution which is right for you.

- » **BankLink Notes** (online or desktop software) – a simple solution where you enter the extra detail your accountant requires about your transactions. Can be accessed online anytime and anywhere, or installed as desktop software.
- » **BankLink Coding Report** – a basic paper-based list where you write in the extra detail.
